ANNIHILATE INK - SAFE SURFACTANT/SOLVENT BLEND THAT ANNIHILATES INK, COATINGS AND VARNISH

Annihilate Ink

Our latest technological safe surfactant/solvent blend that annihilates ink, coatings and varnish from plates and rollers in print industry

**Eliminate Dry Ink with a Deep Cell Reset —
Unclog - Unleash your print.**

When dried ink settles into your anilox cells, your press performance chokes. Blocked cells mean dropped BCM volumes, faded solids, inconsistent color matching, and expensive press downtime.

Annihilate Deep Cell Reset chemical cleaning process penetrates to the very bottom of the microscopic laser engraving.

It targets the most stubborn, hardened ink resins without compromising the structural integrity of your ceramic walls

Spray and leave for 10 seconds to soak, scrub and wash.

This is cutting edge chemical technology with a unique blend of safe solvents, with a 7-7.5 pH at the accurate economical dilution rate, it is very safe for your equipment.

Non - Flammable Non - Corrosive Non - Hazardous
